Google + GoodTime Integration Guide

Updated Oct 12, 2020

Overview

This guide is a step-by-step process on how to integrate Google with GoodTime. This guide is designed for Google Admins. This allows the GoodTime System to access interviewer calendar events to determine which times are available for interviews.

GoodTime utilizes the Google Calendar API to do the following
- Read/Write to calendars (write for only events created by GoodTime)
- Read/Write to group or group calendars shared with individuals (write for only events created by GoodTime)
- Get timezone for users
- Get directory information: user's name, email, and other profile information

Integration with the GoodTime Platform requires each user who wants to access the GoodTime system to sign in using Google's OAuth login system. GoodTime authenticates using the OAuth 2.0 API and requires the following permissions from the user.

Permissions Granted to GoodTime by User

Permissions we request from each user as part of the OAuth process:

Calendar Access	
Scopes	**Use Case**
https://www.googleapis.com/auth/calendar	Searches calendars for available times to interview
https://www.googleapis.com/auth/admin.directory.user.readonly	Searches calendars for available times to interview
https://www.googleapis.com/auth/admin.directory.resource.calendar.readonly	Searches calendars for available times to interview and create calendar events
Profile Access	
Permission	**Use Case**
email	Allows us to identify the current user and what organization they belong to. This does not grant access to read the mailbox.
profile	Get user info to schedule interviews (i.e. names/emails)
